

People have used hand tools to move earth's materials since the beginning of civilization. However, there are limitations to many of the existing designs.

The Problem: Separate tools are required to perform functions such as cultivate, excavate/dig, gather/rake, hoe, shovel, transport, tamp, level, scrape, cut, edge, etc.

The Solution: TC Tools has developed a proprietary suite of multi-function hand tools capable of performing numerous combinations of these functions within single tools.
